Think About Life

Hello everyone, In this 21st century life is too busy, we are doing professional jobs for our lifestyle, using advance technology and get smart in technical field, like using smart phones and our everything is advanced, but we are not thinking about our health our fitness our life, which is most important for us, because out life is the most important , it is precious We should think about it, how to get fit, what we should do for our health.

In the 90th century everyone was fit and strong, that time man using pathways and complete their destination. And now in this generation we are using Bikes, Cars and different type of vehicle for our destination which effect is very dangerous it make us lazy and that effects so many disease. For our fitness we should do exercise, play games and do many more things for our health which gives us a lot of benefit.

“Always think about our health or fitness which gives us better and free disease long lasting life.”

Never Lose Hope In Life

There is no such person as' he got it right all the time'. Nobody succeeds all time. Nobody is destined to remain a failure either. Neither is failure final nor success permanent. Today's success & today's failure are just another step in the long journey of life.

Life Is a GAME. If you play it long enough you will make it .Don't quit midway. Keep learning the lessons it teaches you. Play it long enough. Keep growing & become wiser and wiser play this game to END. Eventually you will cross the finishing line.

The trouble with not having GOAL is that you can spend your life running up & down the field and never SCORE.

Life Accountancy

My birth is my opening stock, Whatever comes in I debit
Whatever goes out I credit, My view is my liabilities
Happiness is my profit, Sorrow is my loss
Soul is my goodwill, Heart is my fixed asset
Duties are my outstanding expenses, Working is my prepaid expenses
Friendship is my hidden adjustment, Character is my capital
Good things I always appreciate, Bad things I always depreciate
Knowledge is my investment, Patience is my interest
My mind is my bank balance, Thinking is my journal entry
Aim is tally balance sheet, Death is my closing stock

Looks Matters

Life is a big journey, in which we all are played different roles for different tasks. Every roles are specified by their looks and behaviour. Here we come to the point of looks-Look is not just your body structure or body color, nowadays in our society look also combines dressing sense and sense of humour. Body structure and body color is not in every peoples hand but what kind of outfits are suitable or good looking for us is in every peoples hand. Hence dressing sense makes person special from others because it is a platform to represent yourself in this open world.

For improving your looks you need to work on your dressing sense . Follow and learn from those person who have good dressing sense according to the situation . It means not that you should copy that person's dressing style , you have to just learn and understand his/her way of dressing and apply it in your daily life. Apart from this you can join personality development classes or you can watch various videos from youtube for improving your looks BECAUSE LOOK MATTERS...

How Google controls the life of an average person.

You may be wondering and thinking: “How can this be?” The truth may strike you like lightning! Google knows each and everything about you. Google knows your address, the person you talk to the most, the places you visit often, the types of books you read, the types of brands you purchase, the types of sites you browse.

You must be wondering: “How?!”

Well, do you remember having filled in all the personal details while signing up for google mail or any other application such as Youtube, Google Maps, Playstore, Google Drive, Google Photos, etc. belonging to Google?

Google has all the personal information about you. Google knows each and everything about you. Hence, it controls you without being seen by you. All the advertisements that pop up when you are browsing, Google is behind them.

The sale promotional e-mails you receive; Google is behind them. Google always knows your exact presence location. Google knows when you do bank transactions. Google knows the phone bill payment schedule. Google knows how much traffic you will encounter while traveling to a place.

So, you see how Google controls an average man or woman's life!

First Private University Of Chhattisgarh
Graded With B+ + By NAAC

NAAC
VISIT

“The peer team comprising of Vice Chancellor and Eminent Professors of different states from NAAC A+ institutions visited MATS University during 25th to 27th October 2018. The MATS University ranked B++ grade after the evaluation. The peer team appreciated the academics, infrastructure and support for sports facilitated by MATS University. The MATS University is now first B++ grade University of Chhattisgarh.”

Message From Department

Welcome and Best wishes to all the members of MATS family who receive this Newsletter. It gives me great opportunity to present the second issue of “Newsletter”. This Departmental Newsletter is one of the way in which we can disseminate information on the MSIT. Department has provide the platform to perform various academic co-curricular, extra-curricular activities. Newsletter will contain the Articles, Departmental events, Departmental activities, Faculty achievement. We feel proud and privileged to convey this to you, that our students initiated a very nice concept to celebrate the events with the people who seeks care and help to connect with the social mainstream. We convey our greetings to all our stakeholders, for their positive criticism enforced us to focus and add more value additions in courses for our students to make them different and more skilled in comparison with other institution running the same faculty. We also convey our heartiest thanks to our Management who motivated, supported in all our alleviations and trusted us for positive outcomes. The success of this Newsletter depends on your response. We appreciate your feedback.

Promoting sustainable development and environmental protection through governance and policymaking

Nearly all areas of human activity are weather, climate and water sensitive. Particular importance is the impact of weather and climate fluctuations on food production. Other areas, including fisheries and forestry, energy and water resources management, land, marine and aviation transport, banking and insurance, construction and urban design, all benefit directly from services provided by meteorologists. The provision and application of accurate and timely weather information, forecasts and warnings contribute to human well-being and are of considerable benefit to socio-economic development and environmental protection. There is growing concern about the impacts on human societies of extreme events such as tropical cyclones, floods, droughts and heat waves. Some of these events cause enormous destruction and loss of life with long-lasting effects. Meteorologists, in collaboration with atmospheric chemists and hydrologists, issue early warnings of natural hazards so that immediate action can be taken to reduce the loss of life and property. They provide advice about how to prevent and manage the risks and impacts of these events in the longer term. Climate variability and change, ozone depletion, dwindling freshwater resources, desertification and increased pollution have important impacts on the global environment. Meteorologists put much effort into monitoring, assessing and predicting these changes and helping policy-makers develop strategies for dealing with them. Hydrologists also play a vital role by studying the water cycle the continuous movement of water on, above and below the surface of the Earth and its impact on the distribution and supply of water. Exactly what meteorologists do depends upon local requirements and the structure of the national meteorological service. This brochure aims to give an insight into the nature and scope of work carried out by meteorologists. Meteorologists must not only understand weather, climate and water but also be able to present the information to users in a manner that is timely and easy to understand and use. Meteorology is an exciting, challenging and highly rewarding profession.

Positive Attitude

"I think our life is nothing but a reflection of our attitude."

According to Michael Jackson, "If you want to make the world a better place, take a look at yourself and make a change." If we want to make happier our self and everyone interact with us we have to follow a positive habits is simple a small adjustment in our mindset and our daily life. Whenever people think about positive attitude, they probably think it's little more than plastering a smile on their face and trying to think happy thoughts. But it's not sufficient it need something more than that goes deeper and has an effect beyond surface cheer. Negative attitudes promote fear, and a narrowing of focus and the mind, while positive attitudes do the opposite. It is a true positive attitude makes our view of life seem broad, full of possibilities. That view leads to actually living our life in a way that makes it natural to be exposed to and acquire new skills.

My First Interaction with Babloo

Mid-day in MATS University Pandari campus and our regular routine of going second floor, My interaction of eyes with parking area and seemed delighted at having camera wielding audience and made his movements elaborate and theatrical for my Nikon eye. We saw that by a secret morse code that only animals have, they had hailed a coterie of likeminded dogs. Scrawny ones , browny ones and majestic ones. Some love and lots of play!

They splashed full speed into and out of the water .Crouching low to stalk , jumping and pouncing ! They bowed, they spinned . They flipped on the sand and they made elaborate biting shows ! I just show Babloo on one side of parking very restless, not playing with others.

My immediate step rushes to destination and find out the activity of Babloo, screaming, all parts of body in pain. What to do no half day no break but cannot leave Babloo. Called my students went to hospital, now it's the time of doctors injecting and operating. Other minutes relaxed face of Babloo, went in painless sleep.

We humans often get caught in the business of being grown up and forget , or willfully omit play and clowning from our lives .When we play, we do so for complicated competitive and egoistical reasons. But watching Dogs always puts me in touch with the core principle of play : Pleasure : Ecstasy of moving in creaturely ways and forgetting all but that moment

Do you know that people and dogs are species that continue to play in adulthood ? Though this playfulness is apparently purposeless , it helps them form bonds, be cooperative and find pleasure ?One sign of ageing in man and dog is a reluctance to indulge in play.

How To Reinvent Ourselves

We hear a ton of discussion about how to reinvent our lives, and it as a rule includes getting to be something, as in "Turn into a warrior rather than a worrier" or "Turn into a manifester rather than a resister."

That is fine, however when we reevaluate ourselves in the most energizing and valuable ways, we don't transform from a second rate identity into an unrivaled one. We change from a thing to an action word. One extremely remunerating reevaluation I made in my very own life (on account of some assistance from my business mentor) included moving from being a cash dreading flop (a thing) into making, having any kind of effect, and euphorically serving others (a progression of action words).

In case you're adhered and you need to push ahead, seeing your words is an incredible place to start. Here's the means by which to wind up the activity arranged action words you can be, rather than the dull things for which you've mixed up yourself before. Avoid making big changes when you're at the bottom of the ladder. Just focus on moving yourself up. Take a walk, sing, laugh, meditate, breathe, listen to music. When you're at the top of the ladder, doing good stuff becomes easy.

The best way to stay up on the top is through service to others. There's even a name for this: "the helper's high." When we stop self-introducing and begin serving, we naturally raise our game.
