

Report on Training Program on Python

Topic- Training program on Python

Date- 22-29 December 2018

Venue- MSIT Department, MATS University

Python training program is organized for MSc III and MCA V students of MSIT department, MATS University. The diversified domains covered in this training programs were web development, Big Data, embedded systems, automation testing, and scripting. Python, is an open-source and powerful dynamic programming language used in variety of applications.

Python training course curriculum covers topics including python programming basics, data types and creating variables. The knowledge is imparted to understand the use of operators, expressions, and control statements for managing the flow of data. The learning curve encompasses advance topics say functions, modules, file operations, and regular expressions. Moreover, participants will also learn about the features unique to Python such as tuples, and output formatting. Training is delivered over Python Integrated Development Environment (IDLE) for writing and running the scripts.

The training program on Python was very helpful to the students in giving the necessary background information. This training program was taken by Afroz loya, representative of Effcon Raipur. This one week training program ended with certification of students followed by examination.
